Situation Analysis

Brand Information

Insta360 was founded on July 9, 2015, and is a global leader in the research, development, and manufacturing of panoramic intelligent imaging devices.

Specializing in panoramic cameras, action cameras, and smart shooting technologies, the company consistently focuses on lightweight and intelligent imaging innovations. With the mission of “helping people better document and share their lives,” Insta360 strives to become a world-class intelligent imaging brand, providing users worldwide with more convenient and creative imaging solutions.

1 Core Technologies & Product Advantages

Driven by technology-led innovation, the brand focuses on consumer intelligent imaging and has built a strong technical ecosystem covering panoramic imaging, image stabilization, AI-powered processing, and computational photography. Features such as panoramic photography, AI stabilization, FlowState stabilization, and the invisible selfie stick overcome many limitations of traditional photography, catering to the needs of young consumers, travel users, and outdoor enthusiasts.

2 Industry Position and the Global Competitive Landscape

Founded in 2015, Insta360 has used algorithm-driven innovation to continuously develop its panoramic imaging products, surpassing Ricoh and becoming a leading global consumer panoramic camera brand.

By the first three quarters of 2025, the industry had formed a highly concentrated competitive landscape dominated by Insta360 and DJI, while competitors such as GoPro and Ricoh continued to lose market influence (Shenzhen Special Zone Daily, 2025).

Despite intensifying competition, Insta360 maintained strong growth momentum in 2024, with revenue increasing by 53.29% year-on-year and 85% of its revenue coming from overseas markets, particularly the United States, Europe, and Japan (Jiang, 2025). Meanwhile, DJI accelerated expansion through aggressive pricing strategies and continued increasing its domestic market presence (Frost & Sullivan, 2025).

Global market share of panoramic cameras in the first three quarters of 2025

3 Future Development Outlook

With advances in AI models and high-performance computing chips, competition in the panoramic imaging industry will become increasingly technology-driven. In response, Insta360 is expected to continue strengthening R&D and core technological innovation, expanding from hardware manufacturing toward a broader imaging ecosystem while reinforcing its leadership in the global smart camera market.

Product Information

The Insta360 X5, launched by Insta360 in April 2025, is the brand's latest flagship panoramic camera. Designed with a "lightweight and intelligent" philosophy, it targets young creators, travel photography enthusiasts, and outdoor sports lovers. Unlike traditional cameras that require users to decide framing before shooting, X5 allows users to shoot everything first and choose their preferred perspective later.

1 How Is It Different from Smartphones or Traditional Cameras?

- **Traditional devices:** Equipped with a single fixed lens. Users have to frame scenes precisely before pressing the shutter, and fleeting moments can never be recaptured once missed.
- **Insta360 X5:** Dual-lens simultaneous shooting captures full spherical vision covering 360° horizontally and 180° vertically. It archives the entire surroundings without blind viewing angles.

2 Core Feature: Capture First, Frame Later

- **One-Tap 360° Capture:** With just one press of the shutter button, X5 automatically stitches footage from both lenses to generate a complete 360° panoramic photo or video, no complicated settings required. Photo modes support HDR, interval shooting, star lapse and burst shot. Video modes include time-lapse, motion lapse, bullet time, loop recording and dash cam mode.
- **Reframing Capability:** This is X5's most distinctive advantage. Users no longer need to worry about composition during shooting. After shooting, they can freely reframe, zoom, crop, and select any perspective in the Insta360 app — from wide-angle landscapes to close-ups or even third-person views.

- **High-Resolution Photography:** X5 supports 72MP panoramic photos with rich detail and realistic color reproduction. Even after cropping or reframing, the image maintains strong visual clarity.

How to Use: Photo First, Frame Later

1. Shooting Setup

2. Capture First

Swipe the screen to choose your view angle and tap the shutter button.

3. Frame Later

After the event, freely choose and frame different shots.

Portrait A Close-up

Landscape Wide Shot

Portrait B Close-up

Export different shots from the same 360 photo.

Why this works

- ✓ Capture everything, no missed moments
- ✓ Reframe freely, endless possibilities
- ✓ Perfect for group events and activities

Tip

Use the Insta360 app to explore, edit, and export your favorite shots in high quality.

3 User Experience: Easy to operate, adaptable to diverse scenarios

- **Compact and Portable:** Weighing around 200g, X5 is pocket-sized and easy to carry, making it ideal for travel and everyday recording.

The weight of X5 is approximately equal to that of an apple (200g)

- **Easy and Instant to Use:** With one-tap shooting and minimal setup, users can start shooting immediately without professional photography knowledge.
- **Suitable for Multiple Scenarios:** X5 is designed for a wide range of daily situations including travel, group photos, city walks, outdoor activities, and spontaneous moments that happen too quickly for traditional framing decisions.

PESTEL Analysis

P — Political

1. National support for sports consumer electronics

- The "outdoor-only" policy has expanded the application scope of panoramic cameras in real-world scenarios.
- Consumer electronics subsidies boost demand for smart imaging hardware

→ Creates favorable policy timing for the X5 marketing campaign

- China's recent policy support for outdoor recreation, sports consumption, and consumer electronics creates a more favorable environment for products such as Insta360 X5 (China Commercial Industry Research Institute, 2025).
- Outdoor leisure policies encourage more travel, city walks, and sports-related activities, which are the same scenarios where panoramic cameras can be naturally used.

2. The "15th" Plan places the innovation of domestic core imaging technologies at the top priority.

- Policy support for optical hardware, panoramic sensors & AI stitching tech

→ Accelerates industrial tech upgrades and global competitiveness

- The 15th Five-Year Plan emphasizes independent innovation in high-end optics, panoramic sensors, and AI algorithms.
- Strengthen the technological foundation of the panoramic camera sector, enabling better performance and differentiation for products like the X5.

E — Economic

1. Gen Z experience-oriented consumption trend

- Young consumers prioritize emotional experience & scenario usability over rigid hardware specs (Yang, 2025)
- Specs-focused traditional imaging products lose appeal among Gen Z

→ Strongly supports X5's scenario-based marketing and youth user penetration

Gen Z's consumption logic shifts from parameter stacking to real-life usability and emotional resonance. They no longer pursue complex professional configurations, but instead favor portable, hassle-free devices that adapt to daily travel and outdoor scenarios. Insta360 X5's scenario-solving functions precisely match this consumption upgrade, forming a unique market attraction.

2. Youth consumption preference for innovative & differentiated product value

- Gen Z actively engages with innovative, distinctive products and ignores homogeneous traditional devices

→ X5's exclusive 360° panoramic photography creates irreplaceable differentiation

Young users are highly sensitive to technological innovation and exclusive functions (Bilibili, 2025). Homogeneous smartphone and portable camera shooting methods fail to arouse their willingness to share. Insta360 X5's revolutionary reframing mechanism and panoramic visual effects deliver unique content output, which effectively drives social interaction and brand viral spread.

Z世代数码产品消费偏好

最关注对产品科技创新和独特性解读内容

根据市场内不同品牌营销内容热度及用户互动数据，对营销科技和特性的内容关注度最高，且互动量大幅提升，显示用户对产品科技、体验等方面的创新最为关注。产品创新的解读内容成为用户关注的重中之重。而在其他关键内容中，“颜值”和“环保”两类的关注度远低于前者，显示用户对产品的体验和科技的设计有非常强的讨论欲望，这两点也是营销内容传播的重要角度。

Z世代数码产品消费偏好分析

来源：小红书官方品牌营销数据，艾媒咨询研究院品牌营销数据

S — Social

1. Universal life-documenting habit among young generations

- 89.5% of young users maintain daily life documentation habits (Wang, 2026)
- Universal visual recording becomes mainstream youth lifestyle
- Drives growing demand for portable, efficient imaging devices

→ Creates broad market space for lightweight panoramic cameras

Visual recording has become a daily youth necessity. Widespread shooting habits continuously boost demand for portable smart imaging tools. Conventional single-angle devices fail to meet upgraded recording needs, while Insta360 X5's lightweight panoramic solution perfectly fits modern youth daily and lifestyle scenarios.

2. Dominant photo-taking preference over video

- User shooting frequency: static photos far outnumbers videos (Zhihu Research, 2025)
- Mainstream portable cameras overly focus on video functions
- High-frequency daily photo demands are largely unmet

→ X5's photo-centric panoramic positioning fills the industry gap

Despite industry emphasis on video functions, static photography remains users' most frequent daily recording method. The long-standing video-biased product positioning leaves a market vacuum for professional daily photo tools. Insta360 X5 focuses on panoramic still-image innovation, accurately matching mainstream high-frequency user habits.

Photo Library Storage Breakdown

CONTENT TYPE	% OF LIBRARY	% OF SROTAGE
Regular photos	52%	31%
Videos	5%	42%
Screenshots	11%	4%
Burst photos	8%	6%
Live Photos	15%	12%
Duplicates	9%	5%

(PhotoAiD, 2025)

3. Booming demand for immersive and complete scene recording

- Immersive outdoor recording market grows over 30% annually (2026 Trend White Paper)
- User needs shift from “single-angle beauty” to “full-scene atmosphere preservation”
- Traditional fixed-frame shooting cannot restore complete on-site context

→ X5's 360° full-scene capture meets upgraded immersive recording trends

Modern users no longer pursue fragmented, over-polished single-frame images, but prioritize authentic, complete scene and atmosphere recording. Insta360 X5's panoramic shooting and intelligent reframing functions precisely fit the booming demand for immersive outdoor and lifestyle content creation.

4. Memory preservation as core photo-taking motivation

- 65% of users shoot mainly for memory retention and future review (Max, 2025)
- User shooting motivation shifts from social showcasing to emotional preservation
- Traditional cropped photos miss scene details and immersive memory context

→ X5's full-scene archiving realizes complete, restorable memory storage

Emotional memory retention has replaced social sharing as the core driver of daily photography. Users crave true, detailed and revisit-worthy life records. Insta360 X5's 360° full-scene recording preserves complete on-site details, better fulfilling users' long-term memory preservation needs than traditional devices.

T — Technological

Booming demand for immersive and complete scene recording

- Immersive outdoor recording market grows over 30% annually (2026 Trend White Paper)
- User needs shift from “single-angle beauty” to “full-scene atmosphere preservation”
- Traditional fixed-frame shooting cannot restore complete on-site context

→ X5's 360° full-scene capture meets upgraded immersive recording trends

L — Legal

Portrait rights and copyright regulations

- Civil Code requires explicit authorization for portrait-related commercial UGC and offline displays

→ tandardizes content collection & display, eliminates infringement risks

E — Enviromental

Global environmental policies

- China RoHS and EU environmental standards advocate lightweight, low-carbon electronic design (China RoHS, 2025; European Union, 2018)
- X5's lightweight design fully complies with global green specifications
- Supports eco-friendly brand storytelling and improves brand credibility

→ Empowers sustainable brand storytelling and enhances public trust

Market Trend

1 Image recording is no longer an occasional act, but a fundamental part of daily life

Global shipments of intelligent imaging equipment

Imaging devices are no longer just recording tools; they increasingly support immersive, everyday content creation. Panoramic imaging, virtual reality, and short-video platforms have expanded how users capture and share visual experiences.

In 2024, global smart imaging shipments reached 52.32 million units, up from 46.57 million in 2023 (Liu, 2025). Growth was supported by improvements in AI processing and image stabilization, which made these devices easier to use and suitable for more daily scenarios, including travel, commuting, and social sharing.

Global shipment volume of smart imaging equipment industry from 2019 to 2024

2 Users prefer content they can explore, rather than just passively watch

Immersive Content Becomes the Mainstream Preference

The imaging equipment industry is moving beyond hardware-based competition toward experience-led value creation (Sina Finance, n.d.). As panoramic imaging, virtual reality, and short-video culture become more common, users increasingly expect recording devices to capture immersive experiences rather than basic footage alone.

Devices limited to conventional video recording are less able to meet these needs. The Insta360 X5's panoramic imaging allows users to capture full-scene environments and preserve moments in a more natural, immersive way, reflecting the industry's shift toward experience-oriented imaging products.

Competitor Analysis

Combining market share data and industry research, we select *Apple, GoPro and DJI (Pocket series)* as core competitors. Their strengths, limitations and campaign-relevant insights are analyzed below:

Brand	 Apple (iPhone)	 GoPro	 DJI (Pocket 3)
Target Audience	Daily casual recorders: People who capture ordinary moments in daily life Social sharing enthusiasts: Users keen to post and share photos online Amateur portrait creators: Beginners who take casual portrait photography	Extreme sports enthusiasts: Surfing, skiing, cycling, skydiving, and rock climbing lovers Outdoor & travel lovers: Fans of hiking, adventure, and underwater shooting in complex scenarios POV content creators: Vloggers using handheld, head-mounted, and fixed shooting ways	Extreme sports enthusiasts: Surfing, skiing, cycling, skydiving, and rock climbing lovers Outdoor & travel lovers: Fans of hiking, adventure, and underwater shooting in complex scenarios POV content creators: Vloggers using handheld, head-mounted, and fixed shooting ways
Core Positioning	Everyday photography device	Action and adventure camera	Portable lifestyle creator camera
Slogan	Shot on iPhone	Be a HERO	For Moving Moments (一寸光阴，一手掌握)
USP	Professional-grade image quality with user-friendly operation: Capture clean, natural and sophisticated photos without professional photography skills. Authentic and enduring visuals: The adjustment of color is favored by human vision, delivering a true-to-life photography experience.	Durable for harsh conditions: Waterproof, shockproof and dustproof, suitable for various extreme sports scenarios or primitive outdoor environments Sharp dynamic shooting: Produce clear and high-contrast footage even under fast movement and shaking conditions.	Ultra-portable design: Mini and lightweight shape fits easily into pockets for carry on. Powerful gimbal stabilization: Three-axis gimbal offsets shakes to capture steady and clear photos while moving.
Branding Focus	Instant sharing ready: Finished photos can be used directly without post-editing, ideal for social media posting.	Compact and lightweight (around 150g): Easy to mount on helmets, chest harnesses and selfie sticks for effortless shooting.	Easy cinematic creation: Intelligent shooting modes help ordinary users produce movie-style visuals effortlessly.
Strengths	Extremely accessible and socially integrated	Strong immersive action recording	Easy-to-use stabilization and lightweight recording experience
Limitations	- Still relies on fixed-frame photography and instant composition decisions; - Mediocre stability for capturing moving subjects	- Directional shooting still requires aiming and framing beforehand; - Weak performance in daily portrait shooting; - Low cost-effectiveness for casual indoor use	- Still based on fixed-lens shooting logic; - Insufficient protection for extreme outdoor environments
Strategic Gap for This Campaign	Helps users take “better photos,” but does not remove framing pressure	Captures movement rather than complete surrounding moments	Makes recording easier, but does not fundamentally change framing logic

SWOT Analysis

S

1) 360-degree panoramic capture

- Breaks fixed-frame limits of phones & traditional cameras
- Higher creative freedom

→ Directly support campaign's core product benefit

2) Shoot-first-reframe-later mechanism

- Eliminates instant-composition pressure & framing anxiety

→ Lowers creation barriers + More relaxed using experience

3) Distinctive visual output

- Eye-catching social content
- High engagement & personal expression value

→ Stimulates organic UGC

W

1) Low consumer awareness of panoramic photography for still images

- Users associate 360° cameras only with action videos / vlog
- The "shoot-first-reframe-later" photo advantage remains unknown

→ Directly explains why the campaign must conduct user education to communicate X5's unique photo-focused value

2) Unperceived user pain points

- Framing anxiety & missed moments seen as unavoidable
- Users do not actively seek solutions

→ Requires market education on awareness to highlight X5 value

3) Premium pricing

- Higher cost vs. smartphones / entry-level cameras
- Extra purchase decision required

→ Barriers for budget-sensitive mass users

O

1) Panoramic Photography Communication Gap

- Although Insta360 is widely recognized for immersive video shooting, its panoramic photography capability remains undercommunicated. Most consumers still perceive Insta360 primarily as a video device.

→ **Blank market positioning opportunity to rebrand X5 as a photo-revolutionizing camera**

2) Breaking the Physical Limitations of Traditional Portable Cameras

- Compared with smartphones and pocket cameras, X5 is not constrained by a single fixed lens, limited sensor framing, or restricted field of view. Its 360° capture capability allows users to preserve the complete surrounding environment first, fundamentally changing the traditional "frame-before-shooting" logic.

→ **Create exclusive product differentiation that fixed-frame competitors cannot replicate**

3) Rising Demand for Immersive Memory Preservation

- Young consumers are increasingly seeking more immersive and emotionally complete ways to document experiences. Rather than simply capturing aesthetically perfect images, users now value the ability to preserve atmosphere, environmental details, and authentic moments that can be revisited later.

→ **X5 fits the trend of "complete emotional memory retention" + Equips the campaign with timely & resonant consumer insight**

4) Growing Rejection of "Perfect Composition Culture"

- Younger audiences are gradually moving away from highly curated and perfection-driven photography norms. Instead, they prefer more spontaneous, pressure-free, and authentic forms of self-expression. X5's shoot-first-reframe-later mechanism fits new-generation shooting habits.

→ **Turns product functional advantages into lifestyle & emotional value opportunities**

T

Competition from smartphones and mature portable camera brands

- Flagship smartphones, GoPro and DJI Pocket dominate the mainstream imaging market
- Competitors own higher user popularity, better affordability and lower usage threshold

→ Continuously squeezes the market share of panoramic cameras

Iterative competition risk from emerging rival products

- Continuous technological upgrading of competing brands

→ Erode X5's unique product differentiation and market competitiveness

Primary Research

Survey

1. Data Collection

In order to gain a deeper understanding of the photography habits, needs, and emotional changes of young users in daily and dynamic scenarios, this study adopted a questionnaire survey as the main research method. The questionnaire covered the **demographic background** of the respondents, their **current photography behaviors**, **common photography scenarios**, and the **pain points during the photography process**. A total of **207** valid questionnaires were collected, which was sufficient to support the research objectives.

This questionnaire was divided into three parts. The first part mainly involved **screening and basic information**, including gender, age, monthly income, occupation, city level where they live, the most frequently photographed scenarios, the equipment used for photography, and their social media posting habits. The second part examined the respondents' **current photography habits** and their **concerns during dynamic scenarios** such as composition, balance between the subject and the background, and immediate decision-making. The third part aimed to **verify the pain points during the photography process**, including decision-making pressure before photography, compensatory behaviors during photography, and regret after photography.

2. Data Analysis

2.1 Characteristic analysis of respondent samples

The survey results show that the respondents were mainly **young users aged 18–30**. Among them, 55.56% were aged 18–22 and 44.44% were aged 23–30. In terms of gender, the sample was relatively balanced, with 53.62% female and 46.38% male respondents. In terms of occupation, the sample was almost evenly split between **students** (50.24%) and **new professionals** with 1–5 years of work experience (49.76%).

Geographically, most respondents lived in **Tier-1 and New Tier-1 cities**. Specifically, 36.23% came from Tier-1 cities and 46.86% from New Tier-1 cities, while 14.49% were from Tier-2 cities and 2.42% from other locations. In terms of monthly income, the largest proportion of respondents is **6,000 to 10,000 yuan** (accounting for 37.2%), followed by **3,000 to 6,000 yuan** (accounting for 34.3%).

This shows that the sample **mainly represents young urban users with certain disposable income, and also includes students with low purchasing power**.

2.2 Current Shooting Habits and Scenarios

The survey shows that the respondents have formed **relatively stable photography habits in daily life**. The scenes they most often shoot are **citywalk** (26.57%), **travelling** (24.64%), **couple dating** (21.74%), and moments in daily life, such as **friends' gatherings and parties** (20.77%), while graduation, concerts, etc. account for 6.28%.

This shows that **photography has become an indispensable part of daily life and socially significant moments**. The word cloud can more intuitively show the daily shooting scenes of the respondents.

In terms of daily photographic equipment, the most frequently used devices are smartphones (50.72%) and ordinary digital cameras (49.28%), while fewer of them use sports cameras (16.91%) or 360-degree panoramic cameras. In terms of content sharing behaviour, 43.96% of people said that they often post their captured content on social media, while 36.71% did so occasionally. This shows that for many respondents, **photography is not only a way to preserve personal memories, but also a form of social display and sharing.**

Finding 1: Shooting in dynamic scenarios is a decision-making task

According to the survey data, in dynamic scenarios such as travelling, citywalk, and dating couples, **respondents not only shoot, but also make multiple visual decisions under time pressure.** For example, “When shooting in a travelling or dynamic scene, have you encountered the following situations?” As shown in this pie chart, among the various situations encountered by the interviewees during the shooting process, the proportion of background composition (that is, how much content is included) is the highest, reaching 21.2%, followed by the situation of missing the moment due to hesitation, accounting for 16.8%.

For the proportion of focusing on characters or scenery, and the proportion/position of the subject is 16.6%, the horizontal or vertical composition accounts for 14.9%, and the need to make quick shooting decisions accounts for 13.8%.

So, this show that in dynamic photography scenes, **users are often in a situation where they need to make quick composition and focussing decisions. In this way, shooting becomes a task that requires decision-making, rather than purely spontaneous behaviour**

When shooting in travel or dynamic scenarios, do you encounter any of the following situations?

Finding 2: People compensate through repeated checking and retaking

The survey results also show that **this kind of decision-making pressure will lead to obvious compensatory behaviour during the shooting process**. As shown in the bar chart below, the respondents tend to take some behaviours, such as checking the photos immediately after the shooting is completed, repeating the shooting many times, and reshooting when dissatisfied.

This shows that users **do not only rely on one shooting result, but tend to reduce the risk of dissatisfaction through repeated checks and corrections**. In other words, in these cases, photography is no longer just about capturing a moment, but also means minimising the possibility of regret through repeated confirmation and adjustment.

Finding 3: Post-shoot regret is a common frustration

In addition, the sense of regret after the shooting seems to be more common among the respondents. The pie chart shows that when reviewing the content shot, the highest proportion of respondents chose "I wish I had tried a different angle", accounting for 20.8%, followed by "regret missing that moment", accounting for 19.4%. The proportion of "I hope I can shoot the characters and background at the same time" is 15.6%, the proportion of "I took it, but I didn't shoot the picture I want" is 15.4%, and the proportion of "I hope I can take more photos" is 15.2%. In contrast, the proportion of the option "in a hurry to decide on a better composition" is relatively low, at 13.4%.

This shows that respondents' dissatisfaction after shooting is not mainly caused by technical failure, but by a feeling that the final frame did not fully match what they wanted to preserve.

When reviewing your captured content, do you have any of the following thoughts?

The bar chart below further reflects respondents' psychological attitudes toward photography in dynamic scenarios. A large proportion of respondents agreed with statements such as worrying about choosing the wrong frame, feeling that shooting is like making choices, feeling that the pressure outweighs enjoyment, and being afraid of missing the desired moment. At the same time, many respondents also agreed that they want a more relaxed shooting process so that they can enjoy the moment itself. **This indicates that the tension in photography does not only exist at the behavioral level, but also at the psychological level.**

To what extent do you agree with the following statements?

Overall, the survey data suggest that respondents' photography experience in dynamic scenarios is shaped by three connected problems: **decision-making pressure during shooting, compensatory behavior during the process, and post-shoot regret afterward. Therefore, the core issue is not only whether users can capture an image successfully, but whether they can preserve the moment without being burdened by immediate framing decisions.**

Interview

Based on the findings from the questionnaire survey, we conducted a semi-structured interview with four respondents to gain deeper insights. The questionnaire focused on shooting habits, user pain points, affective factors, and product value, while also examining the most commonly used social media platforms and reasons when users discuss photography and technology-related topics—providing inspiration for subsequent media strategy implementation.

Demographic & Geographic

The interviewees all have stable incomes. They are young people who are willing to embrace new things (**Young People on the Threshold of Life**), and they love to document the moments of their lives. They all live in first-tier or new first-tier cities.

Interviewee 1: Mr Huang**Age:** 18**City Tier:** Tier 1**Identity:** Freshman photography enthusiast**Income:** ¥ 3000-5000 per month**Interviewee 2:** Miss Hao**Age:** 25**City Tier:** Tier 1**Identity:** Single graduate student, loves traveling and parties**Income:** ¥ 5,000-10,000 per month**Interviewee 3:** Miss Yan**Age:** 25**City Tier:** New Tier 1**Identity:** Non-single white-collar worker**Income:** ¥ 5,000-10,000 per month**Interviewee 4:** Mr Li**Age:** 22**City Tier:** New Tier 1**Identity:** Non-single undergraduate student photography enthusiast**Income:** ¥ 3000-5000 per month

1. Interview analysis

1.1 Mostly Used & Prefer social media:

Wechat, RedNote, and Bilibili

Through interviews, we found that the four representative interviewees primarily rely on Rednote and Bilibili when engaging with technology, photography, and product recommendation content.

First, RedNote's highly distinctive UGC (User-Generated Content) nature is particularly persuasive, encouraging users to participate in

discussions and trust product recommendations. Second, regarding **Bilibili**, users tend to follow **influencers' opinions on tech-related topics, especially authoritative professional influencers**. Finally, beyond these two topic-specific social media platforms, respondents most frequently use **WeChat** for social interaction and information gathering. These findings provide valuable insights for our strategy implementation and media content planning direction.

1.2 Shooting Habits

The four interviewees answered questions regarding shooting content, portrait characteristics, and whether shutter speed required multiple retakes based on their shooting habits. Concerning shooting content and portrait features, Ms.Yan and Mr.Li, as non-single individuals, mentioned that most photos were taken during casual dating scenarios where composition was emphasized. Ms.Yan noted she often needed her boyfriend to "**take multiple retakes**" and strive to "capture the perfect shot," while Mr.Li stated that composition was a major challenge for him. Additionally, all four interviewees highlighted **difficulties with composition** and the need for repeated retakes, particularly when scenes were complex or featured multiple focal points.

1.3 Affective Factors

Regarding emotional factors, all four interviewees expressed regret over unsatisfactory photos and **anxiety about composition** during shooting—particularly in crowded queues or street photography during city walks. When asked, they unanimously stated that they would purchase the Insta X5 if it reduced the need for retakes.

1.4 Product Value

Delving into the product's value, all four interviewees highlighted the need to address composition challenges. Mr.Huang, a photography enthusiast, noted that composition is a professional skill; if the 360-degree panoramic feature reduces reshooting costs, it would also **lessen his frustration with photography and composition**. Ms.Yan and Ms.Huang stated that the 360-degree panoramic shooting and the 'shoot first, frame later' function would allow them to enjoy dates and trips more fully, free from anxiety about finalizing their photos.

2. Findings

Based on our interview analysis, we have summarized the findings into three phases: before shooting, during shooting, and after shooting.

Before shooting

When using Instax5, users experience **reduced pre-shooting stress and less anxiety about composition planning**. For professional photography enthusiasts, this lowers the cost of trial-and-error. Portrait photography lovers find the system less burdensome, allowing them to fully enjoy travel, dates, and city walks. In summary, the preset 'shoot first, frame later' feature **alleviates pre-shooting pressure, enabling users to capture every moment effortlessly**.

During shooting

During photography, users hold the lightweight and convenient Instax5, pressing buttons freely to capture each shot without compositional concerns—**enjoying the moment and documenting moments effortlessly**. Moreover, **repeated shooting is no longer an issue**; a single shot resolves all composition challenges. The 'shoot first, frame later' approach delivers pure photographic enjoyment.

After shooting

Finally, after taking photos, the 360-degree panoramic feature allows users to capture images first and adjust the view afterward, significantly reducing feelings of regret. **The freedom of framing enabled by the panoramic perspective provides reliable assurance.**

Target Audience Analysis

Given the **mid-to-high price positioning of Insta360 X5**, we divide potential buyers into a primary and a secondary target audience based on **purchase feasibility**. While their spending power differs, both groups share a common foundation as **young, urban, socially active users aged 18–30 who frequently capture meaningful moments and care about whether their photos are worth preserving and sharing**.

Primary Target Audience

Demographic & Geographic

Age: 23-30

City Tier: Tier 1/ New Tier 1

Life Stage: Early-career professionals or graduate students

Income: Mainly ¥ 6,000-10,000 per month

Purchase Feasibility: **More realistic self-purchase segment**

Motivation: Enjoy **meaningful** and **socially significant moments**, value self-expression. Hope photos can satisfy both **personal aesthetic expectations and social sharing needs**.

Lifestyle: Enjoy **travel / citywalks, couple dates, gatherings, and daily lifestyle moments**. Seek both emotional meaning and visual satisfaction.

Value: They value **ritual, atmosphere, and emotionally meaningful experiences**, and want to document life without missing the moment.

Secondary Target Audience

Demographic & Geographic

Age: 18-22

City Tier: Tier 1/ New Tier 1

Life Stage: Undergraduate students

Income: Mainly ¥ 3,000-6,000 per month

Purchase Feasibility: **More aspirational, gift-based, or occasion-based**

Behavioral

Photography Habits: Maintain relatively **stable daily photography habits** and **actively capture meaningful moments** in life.

Shooting Process: **Care composition before shooting**, then review, select, edit. Evaluate whether content is worth keeping or posting.

Shared Traits

Psychographic

Emotional Tension: **Feel frustrated** when they fail to capture a photo that feels worth preserving or sharing.

Active Media:

Primary Persona

Social Media Habits

- Active on RedNote and WeChat
- Interested in travel, aesthetic lifestyle and urban culture
- Likes posting photos on personal social media account

Photography habits

- Uses photography to express aesthetic taste and lifestyle
- Pays attention to composition, light, and the integration of people and scenery
- Takes the initiative to shoot at memorable moments

Consumption Concept

- Budget-conscious in daily life, but willing to pay for emotional value, refined quality of life and long-term memorable moments
- Consumption is a way of expressing personal lifestyle

Mr ZHOU

Undergraduate student
In a relationship

Age: 21 years old

City: Chengdu

Income: ¥ 4000-5000 / month

Lifestyle

- Enjoys weekend dates and holiday travels
- Loves exploring new places with girlfriend
- Values shared memories and fun experiences

Miss YAN

Early-career white-collar
professional

Age: 27 years old

City: Shanghai

Income: ¥ 9,000-10,000 / month

Lifestyle

- Values work-life balance
- Enjoys citywalks and casual gatherings with friends after work
- Takes staycation or short trips on weekends
- Attaches importance to a sense of ritual on festivals and anniversaries

Secondary Persona

Social Media Habits

- Active on Bilibili
- Follows travel, dating, creative photography, and digital gadget content

Photography habits

- Takes shots of scenery, portraits, couple photos and casual daily moments
- Has relatively high expectations for photo quality
- Often takes multiple shots and checks results immediately

Consumption Concept

- More budget-sensitive, but interested in trendy digital gadgets
- More attracted by product practicality, creative features, and shareable results
- More influenced by social buzz, UGC, gifts, or occasions.

Problem Statement & Insight

The popularisation and development of digital imaging equipment (such as digital SLR cameras, instant cameras and smartphones) has made photographic records a part of daily life, allowing people to easily capture precious moments.

However, these traditional photographic equipment are limited by the limited picture size and can only provide a single flat viewing angle. This brings great pressure on the composition, because the user must determine the composition before pressing the shutter and take full responsibility for the choice at this moment. Here, the **framing pressure** is defined as the following three dimensions:

1 Decision-making pressure

In dynamic scenarios, users have to quickly decide on portrait vs landscape framing, subject proportions, and how much of the background to keep. Miss the call even slightly, and the moment is gone forever with no do-over.

2 Compensatory behavior

To reduce the risk of unsatisfactory photos, users tend to check the frame repeatedly, take extra shots or retake pictures. Taking picture shifts from being a spontaneous experience to becoming a stressful task that interrupts the moment itself.

3 Post-shoot regret

When reviewing footage later, users often feel unsatisfied, thinking “I should have

taken a few more shots” or “I wish I’d tried a different angle”. This regret stems not from poor photography skills, but from inherent limitations of the device and technology.

At the same time, there are also cognitive differences in panoramic cameras in the market. Many users still mainly associate it with video recording rather than static photography. In other words, panoramic cameras are often regarded as tools for immersive video shooting, but their ability to take 360-degree photos and reduce the pressure of photographic composition is not sufficiently recognised. Therefore, although the product has provided a powerful solution to practical photography problems, **the market has not yet closely linked it with the flexible image capture concept.**

Insight

From the perspectives of both the market and users, we arrived at two key insights.

User insight:

In real-life daily photo-taking scenarios, the youth do not simply seek stronger professional composition skills. Instead, they want a more effortless photography process and a more complete preservation of memories, one that allows them to fully experience the present moment without the constant worry of missing it.

In simple terms, framing and composition should **never become a burden** during shooting. What young people really want is **an easier way to preserve the moment**. In other words, what they pursue is insurance against regret.

Market insight:

The public still perceives Insta360 primarily as a panoramic device for video and action shooting, with little awareness of its strengths as a still-photo tool, which means users only associate the product with motion recording, failing to recognize its capability to eliminate framing pressure in photography.

This major perception gap means X5's unique "capture first, frame later" advantage for static shooting **remains untold**. This directly **justifies the core goal of the campaign: to educate consumers and popularize its photo-focused value**.

Big Idea & Slogan

Core Concept

What is the idea?

"Frame? Whatever. 😊" is the core idea of this campaign for Insta360 X5. It challenges the traditional logic of photography, where users are expected to determine the "right and perfect" composition before pressing the shutter. Instead of treating framing as a fixed decision that must be made instantly, the campaign proposes a more flexible and liberating way of documenting moments: capture everything first, and choose the frame later.

What does this mean?

The idea means that users no longer need to be trapped by the pressure of pre-determined

framing during the shooting. In everyday and dynamic photo-taking scenarios, people are often forced to make immediate decisions about what to include, what to exclude, and how to preserve a fleeting moment within a limited frame. "Frame? Whatever. 😊" rejects this pressure. It suggests that photography should not be about racing to secure the perfect composition in real time, but about preserving the whole moment first and allowing meaning, focus, and perspective to be decided afterward.

Here, "whatever" does not mean the photo does not matter, nor does it encourage careless shooting. Instead, it means users no longer need to be trapped by framing decisions at the moment of photograph.

What does it redefine?

The campaign encourages people to stop obsessing over perfect composition and start focusing on authentic experiences. It redefines photography from "capturing the perfect shot" to "preserving the complete moment."

FRAME? WHATEVER. 🤪

Capture everything first, choose your frame later.

How does Insta360 X5 make this possible?

Insta360 X5 provides the photo technological basis that makes this big idea credible.

Through 360° panoramic, Insta360 X5 captures the whole scene first, rather than forcing users to shoot from a single limited perspective in advance. This allows users to return to the footage later and choose the frame, angle, and emphasis that best reflect the moment they want to preserve.

As a result, the act of photography is transformed. It is no longer about making an immediate, irreversible decision under pressure. Instead, it becomes a more open and exploratory process, in which the complete moment is captured first, and interpretation happens afterward.

Verbal Strategy

1 Core Copy Strategy

Positioning: Break the traditional photo-taking logic of “frame first, shoot later” and free users from framing pressure.

Key Message: Insta360 X5 helps users reduce framing pressure by capturing the

whole scene in 360° first, allowing them to choose the frame later, so they can fully experience the moment while still capturing it completely.

Tone & Style: Casual, confident, young, rebellious, relaxed, conversational — not professional, not serious.

2 Linguistic Structure

Question + Answer structure

- This Q&A structure is highly memorable, rhythmic, and easy to repeat
- Frame? → Directly points to the core pain point
- Whatever → Directly gives a rebellious, free answer

Colloquial & minimalist language

- Uses only two simple words, no jargon, no embellishment
- Super easy to understand, spread, and remember across platforms

Contrast emotion

- “Frame” represents pressure, rules, professionalism, restraint.
- “Whatever” represents freedom, casualness, rebellion, relaxation.
- The strong contrast strengthens the brand attitude.

Objective & SMART Principle

Objective

This campaign positions Insta360 X5's panoramic **still-image capture capability** as the core communication entry point, aiming to shift consumer perception of Insta360 from a primarily video-oriented device to a next generation everyday photo-taking solution by highlighting its **"Capture First, Frame Later" mechanism** and embedding the product into lifestyle scenarios such as travel, city walks, group photography, and memory recording, ultimately strengthening consumer understanding of X5's functional and emotional value.

SMART

S — *Specific*

- The campaign centers on the **still image capture (photo-taking) function** to build a structured understanding of Insta360 X5's value in everyday documentation.
- Anchored by the Big Idea "Frame? Whatever.", the strategy leverages UGC creation and KOL-driven contextual storytelling, distributed across key digital platforms including Bilibili and RedNote, alongside selected offline experiential touchpoints.
- These elements will construct a narrative pathway, which moves from real user pain points to cognitive reframing and finally to product-driven solutions, and this may reinforce the core mental model of **"Shoot First, Frame Later."**

M — *Measurable*

1. Awareness Objective

- Increase recognition of the “shoot first, frame later” mechanism by 20% through pre- and post-campaign survey tracking.

2. Engagement objective

- Improve product page CTR on major e-commerce platforms (Tmall, Taobao, JD.com, and the official Insta360 website) by 30%.

3. Conversion-Support Objective

- Grow RedNote official account followers by 10% (approximately 60–70K), while increasing keyword search volume for “Insta360 X5” and “360° shoot-first framing” by 40–50%.
 - Grow Bilibili account followers by 8% (approximately 50–60K), achieve an average episode view count of 600–800K, and maintain an average completion rate of around 25%.
-

A — *Achievable*

- The campaign builds on Insta360’s established brand equity in computational imaging and its existing user base. By combining KOL-led professional endorsement with real-use-case storytelling, the campaign reduces the cognitive cost of product education.
 - The multi-platform strategy ensures both **functional understanding and scenario-based adoption**, aligning communication impact with downstream conversion objectives.
-

R — *Relevant*

- The campaign is closely aligned with the **core technological strengths and brand positioning** of Insta360 X5.
 - It emphasizes the reconstruction of user perception around “freedom of capture” and “control over perspective,” reinforcing the product’s differentiated value in everyday recording contexts. This supports the brand’s long-term objective of building a premium positioning in the computational imaging category.
-

T — *Time-bound*

- The campaign will run from **June 2026** to **September 2026**, covering peak demand periods including summer travel and outdoor activity seasons. This timing ensures exposure during high-frequency shooting scenarios, enabling efficient reinforcement of awareness and consolidation of the intended product mental model.

Creative Strategy

1 STRATEGY Save the Failed Shots

1.1 Strategy Overview

- ◆ **Slogan:** Save the Failed Shots
- ◆ **Core Logic:** Combine KOL seeding + UGC submissions to popularize Insta360 X5's core functional value
- ◆ **Goal:** Demonstrate X5's 360° capture and reframing capabilities to ease users' photo-taking anxiety; initial campaign momentum, build professional credibility, and establish long-term user interaction

1.2 Social Insight

Viral content on social platforms is usually characterised by “failed photos”, which are often published in a humorous way. However, behind the humour is the anxiety of users: amateur photographers lack professional skills, but they must quickly make decisions on framing/composition; once the shutter is pressed, the moment is irreversible. Seemingly easy self-mockery often stems from the inability to correctly capture the “**right moment**” or “**perfect shot**” when time is tight and technical ability is limited.

#男朋友拍照气死人系列

#旅游翻车现场

#看完别人拍的照片才知道我有多丑

1.3 Core Idea

By combining KOL seeding with UGC submissions of real cases, this strategy is built on this overlooked but widespread emotional tension to popularize the product function. Selected cases are featured in a structured column on the brand's official Bilibili account, where each example is analyzed and reconstructed.

Through diagnostic breakdowns and re-shoot demonstrations, “failed shots” are redefined from sources of frustration into solvable visual problems — specifically framing stress, incomplete scene coverage, restricted viewing angles and post-shoot regret, all of which can be resolved with X5.

Within this process, the product's 360° capture capability, reframing flexibility, and image-processing functions are embedded into the solution. Rather than a boring presenting of technology, we aim to positions technical advantages as direct responses to user pain points, which are rooted in real scenarios and focused on reducing the pressure of missed moments.

1.4 Media Platform

Bilibili is selected as the core platform for this strategy, mainly based on the following three reasons:

1. The strategy requires a complete narrative structure, which includes three links: presenting the failure (failed photos), analyzing and reconstructing the failure, and providing solutions. Long-form video supports best about delivering this complete process and ensuring that users can fully understand the core logic of the strategy.
2. Bilibili has a mature long-form content ecosystem, with users accustomed to in-depth video consumption and engagement, which is consistent with the in-depth analysis and demonstration characteristics of this strategy.
3. The collaborating KOL, Mediastorm, has high influence and professional credibility on Bilibili, and the brand's official Bilibili account also has an existing follower base, which can effectively support the initial exposure of the campaign and maintain long-term visibility.

1.5 Execution Details

1.5.1 UGC Submission Mechanism

- Call for Submissions: Invite Bilibili users to upload "failed photos", including common issues:

- ◆ **Poor composition** (cropped subjects, awkward positioning)
- ◆ **Missing background** (incomplete capture of grand scenes)
- ◆ **Limited angles** (better perspectives found post-shooting)
- ◆ **Missed moments** (failed to capture reactions/interactions)
- ◆ **Post-regret** (realizing better composition in hindsight)

Execution Method

- Set up a submission entry in the brand's official Bilibili column (not a one-off event).
- Guide submissions via comment sections, reducing the threshold for user participation.
- Select representative real submissions from the collected cases for "redemption" in each episode of the column, that is, use X5 to solve the problems of the failed photos.
- The column will have a total of 5 episodes, updated once a week.

Important Note about "failed shots":

Not every submitted failed photo will be featured in the column. We only select cases where the shooting flaws can be fixed with the Insta360 X5 to ensure we can effectively demonstrate the product's core functions.

Incentive Measure:

Four users will be randomly selected in each episode to present an Insta360 X5

Jun.

1	2	3	4	5	6	✓
8	9	10	11	12	13	✓
15	16	17	18	19	20	✓
22	23	24	25	26	27	✓
29	30	31				

1.5.2 Column Content Structure (Per Episode)

1. Presentation of users' original failed photos.
2. Analysis of core failure causes (angle selection, cropping, insufficient scene coverage).
3. Scene recreation shooting with X5.
4. Showcase of multiple reframed versions from 360° footage and solutions to specific problems.
5. Output of actionable shooting logic and operation methods.

Ensures UGC authenticity and professionalism, aligning content with core brand selling points

1.5.3 KOL Collaboration

- **Collaborator:** Mediastorm/影视飓风, a top creator in the digital technology track on Bilibili
- **Role:** Co-launch the first episode and be responsible for providing professional analysis of failure causes, to enhance the professional credibility of the content.
- **Subsequent Episodes:** The subsequent 4 episodes will be led by the brand's official Bilibili account, maintaining the same column structure.
- **Significance:** Mediastorm shares historical and long-term cooperation experience with Insta360, which ensures smooth collaboration and stable content output.

As a top creator IP, its participation delivers strong **authoritative endorsement** and generates essential **initial momentum** to boost early-stage exposure and participation.

2 STRATEGY One Photo, One Exhibition

2.1 Strategy Overview

- ◆ **Slogan:** One Photo, One Exhibition
- ◆ **Core Logic:** Combine UGC with an offline pop-up exhibition that is made from one photo to demonstrate the advantages of Insta360 X5 in capturing the complete scene, which allows preserving hidden details and enables later discovery, echoing the brand's core concept of "choose your frame later".
- ◆ **Goal:** Upgrade the product's **functional value** into the **content value** of panoramic photography, showcasing the potential capability of Insta360 X5 from a practical shooting tool to a creative medium with infinite narrative potential.

2.2 Social Insight

Traditional photography is limited by the frame, as it can only capture the content within the frame at a single moment, making it impossible to capture all details and stories of the scene.

This strategy will break this limitation, aiming to prove that Insta360 X5 can capture the entire scene in its entirety, so that even after the shooting moment, users can still discover every expression of the characters, every detail in the background, the interactions that were not noticed at that time, and every small story hidden in the scene, redefining the value of a single photo.

2.3 Media Platform

RedNote is chosen as the primary online platform for this strategy. As an image-focused community popular among young users, it centers on authentic lifestyle sharing and content exploration, which perfectly fits campaign positioning. The specific reasons are as follows:

- **Mature UGC culture:** It has a well-established UGC participation atmosphere, supporting large-scale participation.
- **Content format match:** As an image-oriented platform, its artistic, lifestyle environment is ideal for photography exhibitions and creative visual expression.
- **Strong viral & seeding capability:** High-quality content breaks out via algorithm, amplifying the "discovery experience".

2.4 Execution Details

This strategy is divided into **two phases**: online UGC challenge (Phase 1) and offline pop-up exhibition (Phase 2), forming an online-offline closed loop. The specific execution details are as follows:

2.4.1 Phase 1: UGC Challenge

- **Participation Mechanics:** Ssers are encouraged to upload spontaneous panoramic photos through official links without deliberate composition. Submitted works need to contain rich scenes and hidden details that can be discovered afterwards
- **Selection Mechanism:** Entries are evaluated jointly by the Insta360 official team and three RedNote KOLs who have a certain degree of popularity in the field of photography on RedNote.
- **Scoring Weight:** The **official review** accounts for 60%, mainly focusing on whether the work meets the campaign theme and can demonstrate the product's core functions; the **KOL review** accounts for 40%, mainly focusing on the content's popularity, creativity, and communication potential.

ONE SHOT OF THE YEAR GRAND PRIZE !!

• Reward Design

1 One Shot of the Year Grand Prize:

1 winner will receive an Insta360 X5 Street Kit (valued at ¥3,498) and a high-capacity memory card (valued at ¥549)

2 Participation Lucky Draw:

3 participants will be randomly selected from all participants to receive an Insta360 X5 Standard Kit (valued at ¥3,298).

This lucky draw mechanism lowers the participation threshold, allowing more ordinary users to be willing to participate in the challenge.

• Legal & Privacy Statement:

To avoid potential risks related to portrait rights and privacy, we will clearly define the authorized scope of submitted content for campaign use. Participants need to confirm work originality and obtain portrait consent from relevant people.

2.4.2 Phase 2: Offline Pop-up Exhibition

The core of this phase is to hold an offline pop-up exhibition themed “The Exhibition Made from One Photo”, which transforms the work of “One Shot of the Year Grand Prize” into an immersive offline experience in Shanghai, WuKang Road.

Demo of One-Photo Exhibition by Wukang Road

Exhibition Core

- ◆ The exhibition focuses on showing diversified re-creation possibilities of a single panoramic picture, rather than simply displaying static photography works.
- ◆ Every exhibition piece will be enlarged from different details within that single panoramic image, turning one photo into countless stories.
- ◆ The **core concept** of the exhibition is to convey that one photo is no longer just one fixed version; with the help of Insta360 X5's 360° panoramic capture capability, it has endless possibilities for discovery and re-creation, further deepening the audience's understanding of the value that X5 could provide: **from “better composition,” to “more complete memory.”**

Interactive Arrangement

The exhibition runs for two weeks. On-site visitors can share visiting moments on RedNote with [#OnePhotoOneExhibitio](#) tag, and they can receive exclusive limited stickers after posting, which effectively drives continuous online secondary communication.

Location Strategy

The offline pop-up exhibition will be held on Wukang Road, Shanghai, with the following specific considerations:

- **Landmark Appeal:** A national-level iconic spot with strong content attractiveness, naturally drawing visitors and boosting exhibition visibility.
- **Target Audience Fit:** Has a high-density young population, perfectly matching the campaign's core TA (young people interested in lifestyle and photography).
- **UGC Spread Advantage:** Boasts a mature RedNote check-in culture, facilitating visitors to share on the platform and driving secondary online communication.
- **Thematic Alignment:** Features rich urban storytelling and layered human scenes, strengthening the “endless discovery” core of the exhibition and echoing X5's 360° panoramic photography logic.

3

STRATEGY

Frame? Keep Walking

3.1 Strategy Overview

- ◆ **Slogan:** *Frame? Keep Walking.*
- ◆ **Core Logic:** Combine OOH advertisement and WeChat long-form storytelling; inspire the **lifestyle** of the audience to appreciate scenes with their own eyes, leaving the framing process to Insta360 X5
- ◆ **Goal:** Demonstrate X5's 360° photo-taking capabilities to ease users' shooting process. Inspire audience by **sharing values** of immersive experience in life, further connecting Insta360 X5 to the citywalk lifestyle.

3.2 Social Insight

In recent years, Citywalk, park-based social activities, and outdoor lifestyle content have grown rapidly, making urban parks a frequent setting for photography and social sharing among young users. Lakesides, tree-lined paths, lawns, benches, and city skylines together create visually layered environments with strong emotional atmosphere.

In these spaces, taking photos has become almost automatic, and lifting a phone to capture the scenery is already embedded in the experience itself.

3.3 Media Platform (WeChat)

The campaign uses the WeChat official account of Insta360 as the primary communication platform.

- WeChat is suitable for long-form storytelling and emotional narrative building, allowing the strategy to expand beyond functional messaging into a deeper reflection on the relationship between experience and image-making.
- The platform also provides strong content persistence and searchability, allowing the campaign to generate long-term brand equity. The offline experiential installation can therefore be extended into a durable and continuously accessible brand asset.

Demonstration of the park-based social activities

However, this also means people often confirm the view through a screen rather than experiencing it directly with their own eyes. The environment is compressed into a framed visual field, and in many cases, shooting begins to delay or even replace the act of looking.

3.3 Core Idea

Building on this insight, the strategy is defined by a central idea: **Frame? Keep Walking.**

Insta360 X5 enables users to delay the act of framing. Composition, angle selection, and full-scene capture can all happen after the moment is recorded. Because nothing is lost in the process, users are free to walk, breathe, pause, and observe the scene in real time.

This strategy aims to encourage users to recognize that lived experience comes first. Seeing with the eyes and moving through space can happen before engaging with a screen, while recording can take place afterward, supported by Insta360 X5's technological capability to preserve and reconstruct the full moment.

3.4 Execution

1 Placement Site Selection

Location: Shenzhen Bay Park

Rationale:

- The project is located along the main coastal walking route of Shenzhen Bay Park.
- The park features a continuous pedestrian pathway that connects coastal scenery, wetland ecosystems, and the city skyline within a single linear experience.
- The spatial openness and layered visual composition provide a strong natural foundation for photographic engagement.

The selection of Shenzhen Bay Park is driven by **three key considerations**:

- Its proximity to the Insta360 headquarters strengthens the brand's connection to Shenzhen's technology identity.
- This clearly defined linear walking route supports the construction of a sequential installation narrative.
- The park is a frequent Citywalk destination with a strong presence of young users, where photography behavior occurs organically without additional prompting.

Demonstration of the installation locations

2 Installation Design and Placement Logic

Five to seven large scale hollow frame billboard installations will be placed sequentially along the walking route.

Each structure is approximately two meters in height and designed in the proportion of an enlarged camera viewfinder, visually referencing the framing language of traditional photography. **Each installation** is precisely positioned and calibrated against the surrounding environment so that the framed view forms a complete and well-composed image.

The composition logic varies across locations:

- At the **lakeside segment**, the frame aligns with the sunset and a seating area to create a balanced, symmetrical composition.
- At a **turning point along the path**, the structure extends across the walkway, allowing natural light and tree shadows to form an arch-like framing effect.
- Along **the coastal segment**, the frame is oriented toward the skyline and water reflections, creating a horizontally expanded composition. Across the entire route, each installation functions both as an independent framed view and as part of a continuous visual sequence. Each structure carries the brand logo on the upper left corner and a unified guiding message on the upper right corner:

“Don’t choose the frame yet. Keep walking.”

Demonstration of the installation prototype

This messaging encourages users to continue moving while momentarily shifting attention away from screen-based composition.

The installations collectively simulate the decision-making process of traditional photography, making framing an explicit and visible act within the physical environment, and allowing users to experience the cognitive load associated with composing a shot in real time.

End Point Installation

Till the end of the walking route, a installation with largest scale is placed, aligned with a key scenic viewpoint. The visual composition remains carefully framed to maintain aesthetic completeness. The upper right corner displays the campaign message:

“Enjoy the view first. Leave the framing to Insta360.”

Demonstration of the installation prototype

The lower right corner integrates an Insta360 X5 product visual and a QR code. The QR code leads to a 360-degree panoramic image captured by the X5 at the same location. In this way, users can freely navigate the scene on mobile devices, adjusting perspectives, and extract their preferred compositions for saving and sharing.

This final interaction translates the physical experience into a functional product demonstration, allowing users to directly understand the concept of full-scene capture and post-shot reframing through personal exploration.

3 Media Execution on WeChat Plaform

In addition, the campaign extends the offline spatial experience into digital social media spaces through a dedicated WeChat feature article, further **reinforcing Insta360 X5's brand positioning** around “shoot first, frame later.”

- The article explains the strategic logic and conceptual meaning behind the installation through a more reflective and in-depth narrative approach.
- By transforming the offline park interaction into **shareable online content**, the campaign encourages further discussion, reposting, and word-of-mouth circulation.
- A 360-degree interactive link is embedded within the article, allowing online audiences to **digitally experience** the “reframing” process themselves.
- This mechanism strengthens the conceptual consistency between **offline installations** and **online touchpoints**, creating an integrated brand experience.

慢行，留光 | 先走进风景，再留住风景

影石 Insta360 2024年6月15日 10:00 浙江

“ 有些风景，不在取景框里，
而在你迈出的每一步。 ”

在快节奏的生活里，我们太习惯用镜头去寻找“完美的瞬间”，却常常忘了——最动人的风景，往往在我们放下手机、专注脚下那一刻悄然发生。

影石 Insta360 发起「Frame? Keep Walking」城市慢行计划，携手深圳湾公园，打造一场关于“慢下来”的户外影像策展。我们在公园里设置了一条“无框观景路线”，用一系列大型相框装置，邀请你放下取景的执念，先走进真实的风景，感受当下的呼吸与心跳，再用 Insta360 X5 360° 记录属于你的视角，把这份体验，完整珍藏。

Demonstration of the PR Article

Message House

FRAME?WHATEVER. 🤪

Key Message

Capture everything in 360 degrees first, and let users choose the frame later

Target Audience

Young, urban, socially active users aged **18–30** who frequently **capture meaningful and socially significant moments**, and who **feel pressure** to produce visually satisfying photos worthy of preserving and sharing

Verbal Strategy

Using a short, casual, question-answer structure to express an anti-perfectionist attitude, liberate users from framing pressure, and build a youthful, relaxed brand tone

Operational Strategy

S1

Save the Failed Shots

S2

*One Photo,
One exhibition*

S3

Frame?Keep Walking.

Core Message

Avoid regret by reframing later

Discover hidden stories within a single panoramic photo

Embrace the moment freely without being constrained by timing

Logical Link

Demonstration of X5's functional advantage

Further Emphasis of a panoramic photo's content value

Emotional Resonance of lifestyle and attitude

Tactics

KOL seeding & UGC "failed photo" submissions

UGC campaign & offline pop-up exhibition

Out of Home Advertisement & PR Article

Strategic Interpretation of the Message House

The Message House clarifies the campaign's core logic. Because traditional photography create framing pressure, for users must decide the frame before shooting. This pressure often leads to repeated checking, retaking, and adjustment, yet users may still experience post-shoot regret when the angle, background, or moment is not fully captured.

X5 addresses this framing-specific pain point through its “capture first, frame later” workflow. Therefore, by capturing a fuller 360° scene first, the users can reframe later and reduce regrets caused by missed background, limited angles, and rushed composition decisions:

Based on this logic, the three strategies form a progressive campaign path.:

Stage 1: Functional Demonstration (S1: Save the Failed Shots)

- Making framing-related problems visible through real user cases.

Stage 2: Value Deepening (S2: One Photo, One Exhibition)

- Demonstrate the creative value of reframing from one panoramic capture.

Stage 3: Emotional Resonance (S3: Frame? Keep Walking.)

- This strategy will turn this functional benefit into a lifestyle attitude, and encourage users to experience the moment first, then decide the frame later.

Media Planning & Budget & Evaluation

The media schedule adopts a progressive multi-platform strategy from June to August, aligning with **summer holidays and peak outdoor usage seasons**, and for the communication, it will gradually evolves from functional awareness to participatory engagement and finally to long-term brand resonance.

1

Phase Functional Seeding (June 1 – July 15) | Cognitive Awareness

- Builds initial awareness of the “shoot first, frame later” mechanism through functional and lifestyle-oriented content.

2

Phase Content Co-Creation (July 1 – August 15) | Value Deepening

- Encourages audience participation and UGC creation by connecting the product with real summer experiences.

3

Phase Integrated Resonance (August 1 – August 29) | Mindshare Consolidation

- Expands the communication from product function to lifestyle positioning through integrated online and offline exposure.

Budget estimation table

Category	Included Scope	Estimated Budget (RMB)	Percentage (%)
KOL & Creator Collaboration	RedNote KOLs / Mediastorm Partnership	700,000	34.66%
Venue / Permit / Operations	Heritage Street Exhibition & Scenic Park Installation	550,000	27.23%
Media Amplification	RedNote / Bilibili content promotion	320,000	15.84%
Content Production	Bilibili video episodes (5 episodes)	200,000	9.90%
Offline Experience & Installation	Pop-up exhibition / Framed installation	150,000	7.42%
Contingency	Weather, maintenance, operational risks	100,000	4.95%
Total Budget	Omni-channel Integrated Campaign	2,020,000	

Rationality of Campaign Expense

• Market Potential & Budget Scale

According to IDC (2025), the global panoramic camera market reached USD 1.212 billion in 2025, with Insta360 accounting for approximately 66% of global market revenue. Based on this share, Insta360's panoramic camera revenue can be estimated at around RMB 5.68 billion. In this context, the proposed RMB 2.02 million campaign budget represents only about 0.036% of the estimated annual panoramic camera revenue, suggesting that the investment level is commercially reasonable and relatively conservative.

• Industry Benchmark & Marketing Practice

For a flagship consumer electronics launch, the proposed budget remains within a reasonable range. Research by the China Consumer Electronics Industry Association (2025) suggests that flagship 3C products may allocate 15%–25% of launch-period revenue to marketing communication, experiential campaigns, and consumer education. Recent Insta360 campaigns also support this spending logic. In product communication, the brand has used experiential formats such as the X5 pop-up activation at Haneda Airport and the Antigravity high-altitude aerial launch campaign with a Bilibili creator (PR TIMES, 2025; SocialBeta, 2025).

• Long-Term Brand Value

The value of the budget should not be reduced to short-term exposure. Since 360° cameras are still developing as a consumer category, users need repeated communication to understand when the product is useful and how “capture first, frame later” changes everyday photography. By placing X5 in familiar situations such as city walks, group photos, and travel memories, the campaign links the product to moments where framing pressure, missing background, limited angles, and post-shoot regret often appear. In this sense, the RMB 2.02 million budget can be justified as a measured investment in consumer education, demand generation, and future product consideration.

Evaluation Measurement

	Objective	Evaluation Method
Awareness	Increase aided awareness of X5's "Capture First, Frame Later" feature by 20%	Conduct Pre and Post-campaign online surveys and platform polls to measure changes in feature recall and brand association
Engagement Objective	Generate 3K–4K RedNote hashtag posts	Track hashtag performance on RedNote, including post volume, engagement growth, and creator participation throughout the campaign period
	Drive 400K–500K Bilibili engagements	Monitor views, likes, comments, shares, coin interactions, and average watch time on Bilibili official episodes
	Increase offline-to-online interaction through 100K QR scans	Use unique QR tracking codes to measure scan volume + interaction conversion
Conversion	Increase product page CTR by 20%	Measure CTR and landing page traffic through advertising dashboards and web analytics tools
Support	Increase RedNote keyword search results by 25%	Monitor RedNote search index trends on Xinhong for campaign-related keywords
Overall	Evaluate overall integrated campaign effectiveness	Consolidate cross-platform analytics from RedNote, Bilibili, WeChat, and offline activations to measure total reach, engagement overlap, traffic flow, and audience conversion across the campaign ecosystem

Rationale

The evaluation framework is built around three campaign objectives: awareness, engagement, and conversion support. So each group of metrics is linked to a specific stage of the campaign, and the results can show not only whether the campaign reached users, but also whether they understood and responded to the core message.

Awareness may be assessed through pre- and post-campaign surveys, platform polls, and feature recall questions. These methods help test whether consumers are more familiar with Insta360 X5's "Capture First, Frame Later" function after the campaign, and whether they can connect this feature with the brand.

For engagement, it will be evaluated through hashtag views, post volume, likes, comments, shares, creator participation, Bilibili views, and UGC submissions. These indicators are more relevant to the Bilibili and RedNote executions, where user's discussion, content sharing, and participation are central to the campaign's impact.

Conversion support will be evaluate through QR code scans, CTR, landing page traffic, and keyword search data. Although these metrics cannot directly prove purchase, they can indicate whether campaign exposure encourages users to search for more information, visit product-related pages, and move closer to purchase consideration.

Overall, these methods provide a practical way to evaluate how well the campaign communicates the X5's reframing value and how strongly consumers respond across different touchpoints.

Appendix

Questionnaire:

日常拍摄相关调查问卷[复制]

第一部分：筛选题与基础信息

第1题：您的性别是 [单选题]

选项	小计	比例
女	111	53.62%
男	96	46.38%
本题有效填写人次	207	

第2题：您的年龄是： [单选题]

选项	小计	比例
18~22岁	115	55.56%
23~30岁	82	44.44%
30岁以上	0	0%
本题有效填写人次	207	

第3题：您的月收入是 [单选题]

选项	小计	比例
3000以下	10	6.26%
3000-6000	71	34.3%
6000-1万	77	37.2%
1-3万	26	12.56%
3万以上	20	9.66%
本题有效填写人次	207	

第4题：您的职业是 [单选题]

选项	小计	比例
学生	104	50.24%
职场新人（入职1-5年）	103	49.76%
本题有效填写人次	207	

第5题：您目前所居住的城市是 [单选题]

选项	小计	比例
一线城市（北上广深）	76	36.23%
新一线（杭州、成都、南京、武汉、重庆、苏州、天津、长沙、青岛、西安、郑州、合肥、宁波、无锡、济南、福州）	97	46.86%
二线（厦门、东莞、佛山、大理、沈阳、贵阳、南昌、哈尔滨、泉州、常州、南通、烟台、温州、长春、南宁、贵阳、石家庄、太原、珠海、嘉兴、金华、绍兴、湖州、徐州、惠州、深圳、佛山、青岛、西安、郑州、合肥、宁波、无锡、济南、福州）	30	14.49%
其他	6	2.42%
本题有效填写人次	207	

第6题：过去12个月内，您最高频的拍摄场景是 [单选题]

选项	小计	比例
日常瞬间（朋友聚会、派对）	43	20.77%
毕业典礼、音乐会...	13	6.28%
情侣约会	45	21.74%
旅行	51	24.64%
City Walk	55	26.57%
几乎没有拍摄行为	0	0%
本题有效填写人次	207	

第7题：您用过上述哪种设备进行拍摄？ [多选题]

选项	小计	比例
手机	105	50.72%
普通数码相机	102	49.28%
运动相机	35	16.91%
全景相机	11	5.31%
其他 [请填写]	9	4.35%
本题有效填写人次	207	

第8题：您拍摄内容后，通常会： [单选题]

选项	小计	比例
经常发到社交媒体	91	43.96%
偶尔发到社交媒体	26	12.57%
主要自己保存	30	14.49%
很少回看，也很少发布	10	4.83%

第二部分：当前拍摄习惯与真实场景

第9题：在旅行或动态场景中，您拍摄时通常最在意什么？（最多选3项） [多选题]

选项	小计	比例
构图是否好看	161	77.78%
人物比例是否自然	128	61.84%
画面里该保留哪些背景	130	62.8%
能否一次拍满意	158	76.33%
是否适合发社交媒体	23	11.11%
不够过瘾的瞬间	17	8.21%
其他	6	2.9%
本题有效填写人次	207	

第三部分：验证 Problem 中的痛点

第10题：在旅行或动态场景中拍摄时，您是否会遇到以下情况？（可多选） [多选题]

选项	小计	比例
我在按下快门前快速思考“横拍还是竖拍”	89	33.33%
我会纠结“拍人还是拍景”	77	37.2%
我会担心人物比例/站位不对	77	37.2%
我会担心背景留太多或太少	90	43.48%
我会觉得自己必须在很短时间内做出拍摄判断	84	40.58%
我会因为来不及判断而错过某些重要的瞬间	78	37.68%
本题有效填写人次	207	

第11题：在拍摄过程中，您是否会有以下行为 [矩阵量表题]

该矩阵平均得分：4.22

	完全不可能	很可能不会	不确定	很有可能	一定会	平均分
拍摄时立刻检查画面	0(0%)	0(0%)	40(19.32%)	80(44.53%)	74(36.75%)	4.15

因为不确定是否拍好而多拍几张

第12题：当您回看拍摄内容时，您是否会有以下想法？（可多选） [多选题]

选项	小计	比例
“如果当时换个角度就好了”	104	50.24%
“如果当时多拍几张照片就好了”	76	36.71%
“如果当时把人物/背景都拍进去就好了”	78	37.68%
“当时太匆忙，没来得及决定更好的构图”	67	32.37%
“拍得太好了，但不需要再拍那个画面”	77	37.2%
我会对当时没拍到那个画面感到遗憾	97	46.86%
本题有效填写人次	207	

第13题：您是否同意以下说法 [矩阵量表题]

该矩阵平均得分：3.94

	很不同意	不同意	一般	同意	很同意	
拍摄时我会担心自己“选错了画面”	0(0%)	0(0%)	58(28.02%)	70(33.82%)	79(38.16%)	
我觉得拍摄不仅是在记录，也是在作选择	0(0%)	0(0%)	88(42.53%)	84(40.92%)	44(21.26%)	
有时候拍摄带来的压力大于乐趣	0(0%)	0(0%)	30(14.39%)	100(48.31%)	60(28.33%)	
有时候，我会担心来不及拍摄到想要的画面	0(0%)	0(0%)	10(4.829%)	68(32.88%)	40(19.32%)	
我希望拍摄过程可以更轻松，更加享受当下	0(0%)	0(0%)	43(20.77%)	120(57.97%)	44(21.26%)	
小计	0(0%)	0(0%)	339(32.76%)	420(40.58%)	276(26.67%)	

Questionnaire (continue):

第14题：假设有一种设备，可以先完整记录场景，之后再从中自由选择画面和角度。

您对该方式的兴趣程度如何？

【单选题】

选项	小计	比例
非常有兴趣	84	40.58%
比较有兴趣	78	37.68%
一般	33	15.94%
比较没有兴趣	12	4.83%
非常没有兴趣	2	0.97%
本题有效填写人次	207	

第15题：如果有这样一种记录方式，您认为它能缓解以下哪些问题？（可多选）【多选题】

选项	小计	比例
当下拍摄时的决策压力	64	30.92%
反复检查/重拍	77	37.2%
事后遗憾	78	37.68%
错过瞬间	72	34.78%
发社交媒体前对“选对画面”的焦虑	74	35.75%
不会回顾什么	15	7.25%
其他【详情】	0	0%
本题有效填写人次	207	

第16题：您是否同意以下说法【矩阵量表题】

矩阵量表平均分: 4.01

	很不同意	不同意	一般	同意	很同意	平均分
我希望先把内容完整记录下来，再决定重点	0(0%)	0(0%)	80(38.65%)	38(18.36%)	89(43.3%)	4.04
我希望拍摄时少做判断，回头再慢慢选	0(0%)	0(0%)	62(29.95%)	87(42.03%)	58(28.02%)	3.98
如果不用当场选构图，我会拍摄得更轻松	0(0%)	0(0%)	101(48.79%)	39(18.84%)	67(32.37%)	3.84
我希望同时拥有“体验当下”和“留下记录”的权利	0(0%)	0(0%)	60(28.9%)	88(41.66%)	71(34.2%)	4.1

第17题：在以下哪种情况下，您会觉得拍摄最轻松？（双选）【多选题】

选项	小计	比例
当我能快速拍出最标准的画面时	67	32.37%
当我不要太多思考就能按下快门时	155	74.88%
当我知道自己之后还可以重新选择画面时	160	77.29%
当别人帮我决定怎么拍时	32	15.46%
本题有效填写人次	207	

第18题：我在拍摄中会遇到以下成片不满意的情况：（双选）【多选题】

选项	小计	比例
构图失误：主体被裁切、人物站位不理想	57	27.54%
背景缺失：画面未能完整记录	92	44.44%
取景角度单一：拍完才发现更好的视角	64	30.92%
错过瞬间：动态影像，没来得及捕捉他人的反应或互动细节	77	37.2%
曝光过曝：光亮度过亮	72	34.78%
对焦不准：拍摄影像模糊	33	15.94%
人像畸变：因为镜头畸变不够美化的畸变	10	0.18%
本题有效填写人次	207	

第19题：以下哪种情况您的拍摄频率会变高【多选题】

选项	小计	比例
我在特殊纪念日（生日、毕业、纪念日）期间拍摄频率会提高	173	83.57%
我在假期出行期间拍摄频率会提高	131	63.29%
我和朋友（情侣）结伴期间拍摄频率会提高	197	95.17%
本题有效填写人次	207	

矩阵平均分之和: 32.41

Interview:

Q1. 最近一次“重要拍摄场景”的完整回忆

回忆你最近一次在旅行/聚会/约会中主动拍摄的场景。当时发生了什么？为什么你想拍？

追问：

- 你当时有没有想过要怎么取景？具体考虑了什么？（横竖、人物比例、背景）
- 你拍了几张？有没有补拍或重拍？
- 拍完当下有立即查看吗？为什么？
- 拍完照最终会保留多少？会删多少？
- 有没有觉得“如果当时多拍一点/换个角度就好了”？

这一组问题的目标是找到：是否存在即时判断压力，是否存在补拍行为，是否存在拍摄后遗憾是

Q2. 拍摄对“体验”的影响

有没有因为拍摄而错过某个瞬间或错失某些体验？

追问：

- 有没有因为拍照而暂停活动？
- 有没有因为拍摄错过某个瞬间？
- 有没有人提醒你“别拍了先玩或者用眼睛看”？
- 如果不拍，你会不会担心错过什么？

这一组问题的目标为是否存在体验与完整记录的冲突。

Q3. 关于出片的压力

追问：

- 一般拍完照片之后，你是否会出现“想要多拍几张换换角度，让成片更好看”的想法？
- 会不会遇到拍了一张但不满意，所以重拍的情况？原因是什么？
- 拍照时会不会想“这张发不发出（社媒）？”
- 会不会有拍完照但出片不满意，遂放弃拍照的情况？
- 会因为拍不出好看的照片而产生不满的情绪吗，有类似情况发生过吗？

这一部分旨在验证出片成败对用户体验的影响，对“拍摄焦虑”的证实。

AI Usage Statement

We utilized AI tools for content production and organization in this plan book. AI was applied to create product manual drafts, all poster visuals and offline installation mockups within the creative strategy section. It also assisted with structuring overall frameworks, compiling situation analysis, and transcribing & sorting questionnaire and interview records. All creative concepts are independently developed by our team, and all data and sources used for external analysis are authentic and traceable.
